Office Action Summary

n + £n

U.S. Patent and Trademark Office PTOL-326 (Rev 11-03) The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 5, 6, 8-13, 15, 16 and 18-20 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Chappelow et al (US 6,458,865).

Chappelow et al teach dental compositions comprising a vinyl ether, an iodonium salt and a sensitizer in abstract and at col. 1, lines 13-16. Various vinyl ethers are taught at col. 6, lines 24-65 wherein diethylene glycol divinyl ether and 1,4-cyclohexanedimethanol divinyl ether meeting the instant formula (I) are seen. Said divinyl ethers inherently have the instant viscosity. The use of fillers such as coupling agent treated silica having particle sizes of 0.02 to 0.04 µm in an amount of 20-80 % by weight is taught at col. 64, lines 1-36. Thus, the instant invention lacks novelty.

Application/Control Number: 09/821,757

Art Unit: 1714

Claims 1, 5, 6, 9, 10, 12, 13, 15, 16 and 18-20 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Krejci et al (US 6,407,148).

Krejci et al teach the same at col. 6, lines 8- 16 and in example 1 wherein 75% weight of borosilicate having particle sizes of less than 2 μm is seen. Thus, the instant invention lacks novelty.

Claim 14 is allowed.

Claims 2-4, 7 and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tae H Yoon whose telephone number is (571) 272-1128. The examiner can normally be reached on Mon-Thu.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan can be reached on (571) 272-1119. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
